## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a first silicon dioxide formation method, classified in class 427, subclass 255.27.
- II. Claims 8-11, drawn to a second silicon dioxide formation method, classified in class 427, subclass 255.37.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions different modes of operation, one involving silicon deposition from a non-oxygen precursor, hydrogen exposure and oxygen exposure, the other involving silicon deposition from a silicon and oxygen containing precursor and exposure to oxygen.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Andrew Merickel on 2/4/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
